

FREIGHT DOOR UPGRADES

Power up your freight doors

Consistent and safe freight elevator operation is critical for buildings. Manually-operated freight doors wear with time and eventually become less reliable. Many older freight elevators do not meet the national code and have safety hazards.

Our freight door upgrade packages meet or exceed national code requirements. Following the upgrade, your freight doors will have improved performance and passenger safety.

Features and benefits

- Extends equipment life
- Faster movement of freight
- Safer, smoother door opening and closing
- Complete code compliance
- Increases building value
- Infrared door detection device allows convenient use of forklifts
