

SCAVENGER PUMP

Prevents oil spills

Scavenger pumps provide a clean and efficient way of sending hydraulic oil from jack head drains to its own reservoir. Once the reservoir gets full, it automatically starts the pump, filters the oil and returns it to the elevator's main oil tank.

A flood protection sensor that prevents the pump from operating if water is in pit is also available.

Features and benefits

- Protection from oil spills
- Filters oil to increase oil life cycle
- Corrosion-proof and lightweight
- Designed for permanent or portable use
