

VANDAL - RESISTANT FIXTURES

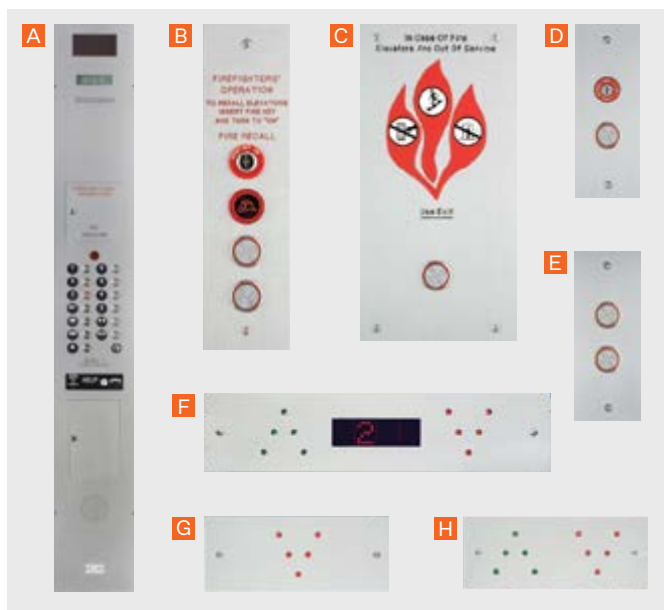

Provides extra protection in challenging environments

This line of signal fixtures are made of tough materials and smoother tighter design to minimize the possibility of damage. It features stainless steel faceplates and plastic-free buttons. These buttons use a standard blue illumination (red, green or white are optional). The pry-resistant hall jamb symbols and buttons are mounted flush with the door frame, making them harder to vandalize.

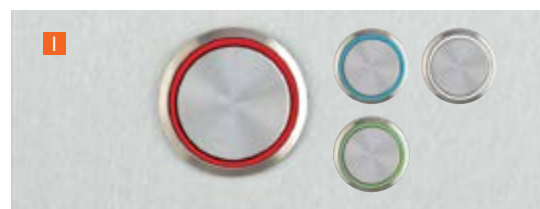

All signal fixtures are certified by a Nationally Recognized Testing Lab (NRTL) before installation per ASME A17.5.

Features and benefits

- Meets all National Fire Service codes for the U.S. and Canada
