

WATER INTRUSION AND PIT ALARM

Protects elevator system during floods

Elevators systems are costly investments, and it's important to protect your system from floods. Our water intrusion and pit alarm includes a liquid intrusion detection system. When the system detects liquid, it automatically tells your controller to move your elevator and counterweight to a safe midpoint. The alarm alerts passengers of the flood-generated elevator movement.

Features and benefits

- Automatically responds to water detection
- Prevents damage to pit equipment
- Easily installed
- Includes a manual operation key switch that's mounted on a designated landing
- Audio and visual alerts notify passengers of flood
